UDOIT Cloud is an accessibility checker that is enabled in all Canvas courses at CSU. The tool scans course content to identify errors and provides suggestion to improve accessibility in Canvas courses. These improvements make it easier for all students to use your course content.

**What does UDOIT look for?**
UDOIT scans Announcements, Syllabus, Assignments, Discussions, Files*, Pages, and Module URLs providing a report of errors and suggestions such as raw URLs, missing alternative text, proper table formatting, descriptive text links, closed captions or transcripts for video, etc.

*UDOIT Cloud does not scan the content in uploaded files. For further information on how to make content accessible, please visit the [Accessibility by Design](https://www.colorado.edu/accessibility) website.

**Using UDOIT**
1. Access the Canvas course shell and select "UDOIT" on the course navigation
   - Don’t see UDOIT listed on your course navigation? [Follow these instructions to enable it](#).
2. Using the checkboxes, select the content areas you would like to scan. It is recommended to scan the entire course at least once.
3. Click the green “Scan This Course” button.
UDOIT Report

Once the scan is complete, the report will display below the green “Scan This Course” button.

1. The first tab of the report is a report summary. Underneath the “Summary” tab, other content areas will appear if there are suggestions or errors.

2. Click the “+” next to the content area to view suggestions and/or errors.

3. UDOIT will provide details about the suggestion and recommended changes. You can make changes directly within the report.
4. To view the source of the issue, click on the “View the source of this issue” link. Then click the green “U FIX IT!” button to make direct updates.

5. To save changes, click the “Submit” button.
